

ALL FILL INT. LTD.

The Series 100 filler offer fully automatic filling with no-tools changeover for different containers and powders.

Container changes are accommodated simply and quickly by adjustment of the conveyor guide rails, indexing stop cylinders and head height. The filling head features tool-free removal of auger and hopper.

Neck-entry filling minimises dust, whilst bottom-up filling prevents aeration and permits compaction where necessary to fit the full fill weight into the container. All-Fill's unique conveyor chain, stainless steel or plastic as appropriate, provides a recess-free wipe-clean stainless steel surface and affords access to the underside of the container for lifting. Neck locators can be utilised for centralising narrow neck bottles, and vibration for settling granular products.

Features

- No container change-parts
- No-tools changeover
- Safety interlocked lift
- Neck-entry 'dust-free' filling
- Bottom-up compressiive filling
- All stainless steel contact parts
- PLC control with 50 recipe memory
- Full colour touch-screen panel

Options

- Container vibration settling
- 1 to 4 heads (2 twins)
- Multi-chain, slat and belt conveyor options
- Weigh-fill, checkweigher feedback and tare and gross configurations
- Horizontal screw, inclined spiral/screw or vacuum bulk feeders
- Interlocking dust containment enclosure
