

ALTECH SRL

ALTECH at PHARMINTECH

ALTECH will be taking part at PHARMINTECH, where it will highlight a representative, interesting host of its systems for the labelling, identification and traceability of pharmaceutical products. It will present the **ALpharma** labelling systems, in 3 different configurations:

° the **ALpharma C**, which can apply labels to cylindrical vials and overprint sensible data (batch codes and best-before dates). It is equipped with a checking device for performed labelling and overprinting, touch screen and control software compliant with FDA cfr. 21 part. 11 rules. The machine is certified as per IQ/OQ validation process, with the provision of the related documents. Its cruising rate can reach 200 pieces/min.

° the **ALpharma B**, in a configuration that applies pharmaceutical tags on shaped cases using the new ALritma X head. The machine on display was designed as an integrated system equipped with an ink-jet printer to code individual cases by means of univocal datamatrix codes (for product traceability), and includes a built-in Cognex video-camera for checking and ejecting products not correctly codified. The whole system is monitored by the innovative Vericode software, designed in cooperation with Metapack, whose interface enables the user to simultaneously set the print layout and control parameters.

° the **ALpharma A**, for the wrap-around labelling of vials from tray to tray. It features innovative devices for better ergonomics and easier change over. Its cruising rate can reach 150 pieces/min.

ALTECH srl is a leader in the production of material labelling and identification systems, which it distributes all over the world. It is based in Bareggio (Milano) – Viale De Gasperi, 72 – tel. + 39 02.90.363.464, fax +39 02.90.363.481- e-mail: labellers@altech.it - web-site: www.altech.it
