PLANTS MAINTENANCE WITH CRYOGENIC TECHNOLOGIES

On the occasion of Pharmintech, CPS srl is pleased to present its CPS ICE technology for the maintenance and cleaning of plants in the pharmaceutical industry, via means of dry ice (CO₂-79).

The cleaning with dry ice (or cryogenic cleaning) is an efficient and highly environmentally-friendly process. It allows to get remarkable savings in terms of time and it is an excellent solution for all those cases in which not only the cleaning but also a total abatement of bacterial load are required.

The maintenance and cleaning of the plants with CPS ICE system permit to operate directly on production lines, electrical parts and automatism without the need of disassembling and reassembling the equipments.

Furthermore, the cryogenic maintenance is effective for a total removal of bacteria where a thorough disinfection is needed.

The CPS ICE system is also particularly suitable for the cleaning of controlled environments. The CPS technicians are professionally qualified and trained to operate in this sector.

CPS srl is specialized in cryogenic maintenance and can therefore offer a thorough service with highly qualified staff, dedicated solutions for any type of intervention and company, consulting, interventions directly at companies sites, short and long term equipment rental as well as assistance and support with skilled technicians.
