

FARMO RES SRL
50 YEARS OF EXPERIENCE IN BUILDING THERMOFORMING MACHINES

FARMO RES has been a leading figure on the worldwide market with their thermoforming machines for over 50 years, designing and projecting packaging machines for pharmaceutical products in trays such as vials, ampoules, syringes, also cosmetic, personal care and food products, and to complete the range of machines, suppository, ovule, and liquid unit dose lines.

FARMO RES machines are built according to the most severe conformity regulations, following the quality standards required by the Pharmaceutical market, our machines are equipped with loaders or robots dedicated to the type of product together with connection systems in line with up and down stream machines.

FARMO RES machines are built using the latest and most innovative technology, with translation movement by servo driven motors which allows a fast productivity rate while keeping the machine highly flexible: Vision, printing and other equipment can also be integrated.

By programming the SoftWare internally, always using the most innovative electronics available on the market, we are able to customize the handling and gathering of the production data and machine life information based on the customer's requirements, the system can be interfaced with external nets for data handling and product tracking systems.

All FARMO RES machines are equipped with size parts designed and produced according to the customer's requirements and necessities to obtain products packed with the best presentation possible, while satisfying requirements for all markets, FARMO RES also supplies services for package prototype projects for marketing studies.

FARMO RES collaborate with consolidated partner companies each expert in their own field to supply complete packaging lines.
