EASYLOCK RANGE

Screw or pressure cap? Starting from today it is no necessary make a choice!

The new range of EasyLock was born from the idea to match the comfort of pressure closing with the easiness of screw opening.

After having filled it, the pot is closed by pressing the lid. Thanks to a particular kind of gap between external rim of pot and inside rim of lid, the closure results extremely airtight and the lid can be opened the first time only breaking the seal that wraps it.

After having broken the seal, the pot can be easily opened and closed in a screw way.

Easylock is an elegant and winning range, that can be customized by reproducing high definition images on adhesive labels that can be easily stick on these pots with cylindrical shape.

Realized with first quality material, the different sizes of the range go from 30 till 1250 ml of contents.

The kind of closure, the shape and the peculiar characteristics of these small pots, make Easylock the ideal solution to contain pharmaceutical and cosmetic products.
