

## **LAETUS**

### **LAETUS PRESENTS THE NEW MACHINE PRINTSPECT FOR MARKING AND VERIFICATION OF FOLDED BOXES IN PHARMACEUTICAL PRODUCTION.**

The PrintSpect machine results in the ideal solution for any request of marking and inspection on-line and off-line fully compliant to directives in force in matter of packaging security and anti-counterfeiting (CIP French code, products serialization, Track&Trace).

Thanks to a very stable and smooth package handling system, the modular structure of hardware and software parts and several types of settings, it's possible to achieve a perfect and easy integration into existing packaging lines and also let the system be ready to match any other future requirement.

Various configuration are available depending on the application: Print and verification on side or top surface of the package; Alternative print and verification on side or top surface (only one printing head and camera required); Dual print and verification on side and top surface of the package. The package handling system will be designed depending on the application requirement.

The wide range of formats, the User-Friendly HMI by a PC Panel 12" touch screen, the included ejecting station and the possibility to employ different types of marking devices assure a great flexibility and easiness of use.

The well known and proven vision device Inspect wt by Laetus, assures an extremely high efficiency in term of data inspection and high throughput.

The Software Platform C-TTS by COESIA provides the full management of marking and verification process , as well as the data entry, data exchange and reworking operation, and easily allows to improve the management feature at line and plant level.
