NEW HIGH DEFINITION INK JET MARKING SYSTEM V5 SERIES

The new ink jet marking systems V5 Series high definition Limitronic are available in the exhibition space of "Marking Products".

They are able to print both text and graphics at typographical level at approximately 200 dpi. directly onto packaging for 70mm. in height.

Their printhead with no mechanical parts subject to wear can ensure consistent print quality over time.

Their technology does not require to cleaning and purging operating costs.

Every unit can independently drive up to 4 printheads: it is possible mark the product packaging and the packaging container with the same marking system for example.

The UV ink version assures very short drying time.

In the four-color version the combination of typographical quality with colours permits to customize blank packaging in real time.

Marking Products also shows all other kinds of ink jet marking and coding systems: the Hitachi ones' for micro character, the Matthews-Swedot ones for small and macro character.

The Hitachi collection can be considered adapt to all needs, from the entry-level two-lines PB one to the high speed one, model PXR-H450W able to print up 4 text lines at 3100 char/sec. (1 line text, 5x7 font) to the pigmented version.

The printing height are included between 1 and 15 mm.

The Matthews-Swedot systems have a large choice regarding printheads. They can be 7,16,32 nozzles, than can be suitable to every kind of production. The range of inks available covers every type of surface.
