

SARONG SPA

THERMOFORMED UNIT DOSE PACKAGING

Sarong sells vertical thermoform, fill & seal machines and films for pharma suppository and unit doses. The company was established in y1972 and since y2000 supplies unit dose machines for cosmetic, chemical and food application. Standing up packs with a flat bottom like a blow moulded bottle and 2 components packs filled with 2 different liquids inside, are also possible. Horizontal thermoforming machines for unit doses with top lidding foil (creams, liquids) complete the program. The range of packaging materials is mainly produced in a new plant and have obtained ISO 9002 certification through the tuv. The environment is iso8 class classified and provides lamination, printing and slitting of the foils. The pharmaceutical applications still represent the major part of sarong business serving this market with machinery and packaging material for: suppository and ovule packs; over the years sarong has been extending the range of its packaging suppository lines for different outputs from 2.500 up to 30.000 cavities/hr. Capacity from 0.5 to 5.0ml in aluminium foils (alu/pe and pp/alu/pe) and plastic foils (pvc/pe; pvc/pvdc/pe). Unit dose packs from 0.5 to 20.0ml for vitamins, nutraceuticals, vaccines, ophthalmic, syrups, disinfectants, cream, veterinary products, gels, etc. In aluminium (alu/pe and pp/alu/pe) and plastic multilayer barrier foils (pvc/pe; pvc/pvdc/pe; pet/pe; pp/pe; pe/coc/pe).
